# Groundwater Remediation And Treatment Technologies

**technical report 5: groundwater remediation and management ...** - technical report 5: groundwater remediation 2 1 introduction groundwater remediation is the cleanup of contaminated groundwater to levels that are in compliance with regulatory limits. this involves either ex situ or in situ methods. in the ex situ approach, **overview of groundwater remediation technologies ... - itrc** - groundwater remediation technologies shown to be effective for the treatment and removal of mtbe and tba include both ex situ technologies (pump and treat) and in situ technologies (air sparging, bioremediation, chemical oxidation, phytoremediation, and monitored natural attenuation). **examples of groundwater remediation at npl sites - epa** - program overcame difficult remediation challenges, such as groundwater contaminated with chlorinated solvents (including the presence of dense non-aqueous phase liquids [dnaps]) and complex hydrogeologic settings. the npl sites discussed in this report were selected based on several criteria, including the use of **groundwater remediation strategies tool - solinst** - api groundwater remediation strategies tool 1 1.0 introduction - mass flux approach potential impacts on groundwater receptors and the need for and relative benefits of alternative remedial measures may be evaluated on the basis of the mass flux of contaminants from the source zone to the receptor. **general permit for the discharge of groundwater ...** - groundwater, treat it to an appropriate standard and inject it back to groundwater through a designed infiltration system. "groundwater remediation wastewater" means wastewater generated in connection with investigating pollution or remediating polluted groundwater, sediment or soil. **groundwater introduction to in situ bioremediation of groundwater** - introduction to in situ bioremediation of groundwater was prepared by the office of superfund remediation and technology innovation (osrti) as an introduction to in situ bioremediation of groundwater. this information is intended for u.s. environmental protection agency (epa) and state **prodss - groundwater remediation case studies - ysi** - groundwater remediation case studies. application note. a625. environmental consulting group uses the ysi pro. dss to collect data their customers can trust **ozone sparge technology for groundwater remediation** - ozone sparge technology for groundwater remediation charles r. plummer, p.e., m.s., michael d. luekett, p.e., shaun porter, and robert moncrief abstract ozone sparging is an oxidation remedial technology for groundwater remediation, which is rapidly gaining wide acceptance by the state agencies as an effective method for remediating **in situ groundwater bioremediation** - has also lead to many "failures" of in situ groundwater bioremediation due to a lack of fundamental understanding of requirements, and limitations, in terms of hydrology, geology, and biogeochemistry at various scales. 2 terminology biological treatment - any treatment process that involves organisms or their products, e.g., enzymes. **njdep-n.j.a.c. 7:9c-ground water quality standards** - water remediation standards; and other requirements and regulatory actions applicable to discharges that cause or may cause pollutants to enter the ground waters of the state, including nonpoint and diffuse sources regulated by the department. other relevant laws - through which the ground water quality standards may be applied include, but are not **in situ bioreactors for in-well groundwater remediation** - enhancement of in situ bioremediation in groundwater with compact bioreactor installed in -well • overcomes common limitations of bioremediation of groundwater - low contaminant concentrations • a threshold concentration of substrate is required for growth - substrate inhibition • at high concentrations some biodegradable **groundwater remediation - thermo fisher** - groundwater remediation 3 total fluids recovery - pumps qed ap4+ autopump® the next generation autopump easier to disassemble and clean the ap4+ was made easier to clean by borrowing from our hammerhead® pump design, using 3 bolts to attach the pump inlet and open up the pump. this is easier than having to rotate the inlet **guidelines for investigating and remediating nitrate ...** - remediation and/or extraction of water is often costly and may require a long implementation period, making the timely removal of nitrate- and ammonia-contaminated soil critical for minimizing or reducing the continued impact to groundwater or surface water. if groundwater or
